

Iridium AccessPoint, AccessPoint Connect and AccessPoint Mail & Web Now Commercially Available

MCLEAN, Va., Oct. 24, 2011 -- Iridium Communications Inc. (Nasdaq:IRDM) announces the commercial availability of a complete suite of Iridium AccessPoint products and services. The suite includes the Iridium AccessPoint Wi-Fi hotspot accessory, the free Iridium AccessPoint Mail & Web optimization software, and the Iridium AccessPoint Connect downloadable application.

"This innovative suite of Iridium AccessPoint products and services enables smartphones and laptops to work anywhere in the world, easily and efficiently over the Iridium network," said Joel Thompson, vice president, product management, Iridium. "These new products, which are a first for the industry, are the epitome of our recently-unveiled Iridium Force vision. This is a terrific example of Iridium's commitment to enhance personal communications. We are making the world's furthest reaching network more accessible and cost-effective through devices that customers already use daily."

Iridium AccessPoint Connect

Iridium AccessPoint Connect is a downloadable application that turns any Windows laptop into a global Wi-Fi hotspot when connected to an Iridium Extreme or Iridium 9555 satellite phone. Iridium AccessPoint Connect enables Wi-Fi-compatible devices to synchronize and respond to email, or use the Internet, over the Iridium network.

Iridium AccessPoint Wi-Fi Hotspot Accessory

Iridium AccessPoint is a portable and lightweight Wi-Fi hotspot accessory that connects smartphones or laptops to Iridium using an Iridium Extreme or Iridium 9555 satellite phone. Iridium also is offering, at no additional charge, its Iridium AccessPoint Mail & Web software for use with the Iridium AccessPoint Wi-Fi accessory.

Iridium AccessPoint Mail & Web

Iridium AccessPoint Mail & Web enables email and Internet services by optimizing them for use over the company's global network. It maximizes the user's time on the Iridium network by managing the data connection and by improving the effective speeds. The software allows for offline viewing and composition of emails; configuration and filtering of large data files and attachments; and mid-file restart of attachment transfers if required. Iridium AccessPoint Mail & Web automatically disconnects after the transfer of data, allowing ease of use and cost control. It provides a reliable connection anywhere and features built-in firewall protection to block extraneous Internet traffic for data speeds up to five times faster for web browsing and 15 times faster for email. Users of Apple operating system (iOS) devices, and Windows and Mac laptops, can register and download Iridium AccessPoint Mail & Web software for use with Iridium AccessPoint. BlackBerry and Android smartphone users can register and obtain set-up instructions for use of their devices with Iridium AccessPoint. Iridium plans to make software for Apple iOS devices available by the end of 2011.

"Iridium AccessPoint Mail & Web is optimized for Iridium so it maximizes users' time spent on the network," Thompson said. "This application truly provides enhanced data communications efficiencies and cost savings. It improves the effective speed and reduces the amount of airtime required to send and receive emails. We expect existing and new Iridium customers to greatly benefit from the 10-12 emails per minute transfer rates that we have seen when using the product."

Iridium AccessPoint will retail for less than \$200 (USD). Iridium users can download Iridium AccessPoint Connect and Iridium AccessPoint Mail & Web free of charge

at www.iridiumaccesspoint.com. www.iridiumaccesspoint.com also lists the many Iridium AccessPoint service providers. Subscribers are required to use the services with an Iridium 9555 or Iridium Extreme phone. Standard per minute usage fees for airtime apply.
